

Assignment 1

1. Create a new folder and go inside it
`mkdir git_assignment1`
`cd git_assignment1`
2. Create the files
`touch Code.txt Log.txt Output.txt`
3. Initialize Git repository
`git init`
4. Stage only Code.txt and Output.txt
`git add Code.txt Output.txt`
5. Commit the changes
`git commit -m "Add Code.txt and Output.txt files"`
6. Link your local repo to GitHub
`git remote add origin https://github.com/username/git-assignments.git`
7. Push your commit
`git branch -M main`
`git push -u origin main`

Assignment 2

1. Create working directory and go inside
`mkdir git_assignment2`
`cd git_assignment2`
2. Initialize Git repo
`git init`
3. Create feature1.txt and feature2.txt in master branch
`touch feature1.txt feature2.txt`
`git add feature1.txt feature2.txt`
`git commit -m "Add feature1.txt and feature2.txt in master branch"`
4. Create 3 branches: develop, feature1, feature2
`git branch develop`
`git branch feature1`
`git branch feature2`
5. Switch to develop branch and create develop.txt
`git checkout develop`
`touch develop.txt`
6. Stash this file
`git stash`
7. Switch to feature1 branch
`git checkout feature1`
`touch new.txt`
`git add new.txt`
`git commit -m "Add new.txt in feature1 branch"`
8. Go back to develop branch
`git checkout develop`
`git stash pop`
`git add develop.txt`
`git commit -m "Add develop.txt in develop branch"`

Assignment 3

1. Create working directory and go inside
`mkdir git_assignment3`
`cd git_assignment3`
2. Initialize Git repo
`git init`
3. Create initial file on master
`echo "initial commit" > main.txt`
`git add main.txt`
`git commit -m "Initial commit with main.txt"`
4. Create branches develop, f1, f2
`git branch develop`
`git branch f1`
`git branch f2`
5. Switch to develop branch and add develop.txt
`git checkout develop`
`touch develop.txt`
`git add develop.txt`
`git commit -m "Add develop.txt in develop branch"`

```

6. Switch to f1 branch and add f1.txt
git checkout f1
touch f1.txt
git add f1.txt
git commit -m "Add f1.txt in f1 branch"
7. Switch to f2 branch and add f2.txt
git checkout f2
touch f2.txt
git add f2.txt
git commit -m "Add f2.txt in f2 branch"
8. Add GitHub remote
git remote add origin https://github.com/username/git-assignment3.git
9. Push all branches to GitHub
git push -u origin master
git push -u origin develop
git push -u origin f1
git push -u origin f2
10. Delete f2 branch locally
git branch -d f2
11. Delete f2 branch on GitHub
git push origin --delete f2

```

Assignment 4

```

1. Create working directory & initialize repo
mkdir git_assignment4
cd git_assignment4
git init
2. On master, create master.txt, stage & commit
touch master.txt
git add master.txt
git commit -m "Add master.txt in master branch"
3. Create branches: public1, public2, private
git branch public1
git branch public2
git branch private
4. Switch to public1, add public1.txt, stage & commit
git checkout public1
touch public1.txt
git add public1.txt
git commit -m "Add public1.txt in public1 branch"
5. Merge public1 into master
git checkout master
git merge public1 -m "Merge public1 into master"
6. Merge public2 into master
git merge public2 -m "Merge public2 into master"
7. Switch to private, edit master.txt, stage & commit
git checkout private
echo "Edited by private branch" >> master.txt
git add master.txt
git commit -m "Update master.txt in private branch"
8. Merge private into master
git checkout master
git merge private -m "Merge private changes into master"
9. Update public1 and public2 with new master
git checkout public1
git merge master -m "Update public1 with new master changes"
git checkout public2
git merge master -m "Update public2 with new master changes"
10. Update private with final master changes
git checkout private
git merge master -m "Update private branch with final master changes"

```

Assignment 5

```

1. Create working directory & initialize repo
mkdir git_assignment5
cd git_assignment5
git init
2. Create required branches
git branch develop

```

```
git branch feature/login
git branch release/v1.0
git branch hotfix/urgent-fix
3. Commit something in feature branch
git checkout feature/login
touch feature.txt
git add feature.txt
git commit -m "Add feature implementation in feature branch"
4. Merge feature into develop
git checkout develop
git merge feature/login -m "Merge feature/login into develop"
5. Merge develop into release
git checkout release/v1.0
git merge develop -m "Merge develop into release/v1.0"
6. Merge release into master
git checkout master
git merge release/v1.0 -m "Release v1.0 merged into master"
7. Push all branches to GitHub
git remote add origin https://github.com/username/git-assignment5.git
git push -u origin master
git push -u origin develop
git push -u origin feature/login
git push -u origin release/v1.0
git push -u origin hotfix/urgent-fix
8. Hotfix: urgent change on master
git checkout hotfix/urgent-fix
touch urgent.txt
git add urgent.txt
git commit -m "Add urgent fix file in hotfix"
git checkout master
git merge hotfix/urgent-fix -m "Merge urgent fix into master"
git push origin master
```
